Firm Innovation And Productivity In

The workhorse model of this relationship is presented and the implications of analysis using this model and the usually available data on product and process innovation are derived. The recent empirical evidence on the relationship between innovation and productivity in firms is then surveyed.

Innovation and Productivity

Innovation leads to entry, which in turn leads to rising productivity dispersion (during the experimentation period) and rising productivity growth (during the consolidation period). This process leads to a period of productivity growth from both within-firm productivity growth (at successful innovators) and productivity-enhancing reallocation dynamics (as resources flow towards successful developers and adopters).
