...

Gases are always liquefied for transportation in bulk simply because more cargo can be fitted in a given volume. Typically, but dependent upon the product, 1 volume of liquefied petroleum gas (LPG) is equivalent to over 250 volumes of vapour and 1 volume of liquefied natural gas (LNG) equivalent to 600 volumes of vapour.

Being a liquefied gas, LPG must be stored in an enclosed container under pressure. The fluid in a tank is in state of equilibrium with the gas vapors on top of the liquid providing the tank pressure to keep the liquid from boiling. Appendix A shows a chart outlining the physical properties of propane and butane.
