The advantage is that RFID can use the same wireless network already in place for the communications. It will be interesting to watch the adoption of RFID over Wi-Fi and to realize the value of keeping your existing infrastructure in place with a wide open research and development opportunity and the adoption of new chips and tracking systems.

RFID over Wi-Fi - Technology First

The frequencies used by cordless phones, RFID, baby monitors, wireless security cameras, Bluetooth and Wi-Fi are in the unlicensed 2.4 ghz (and 5.0 ghz) band carved out by the FCC. Because it's all unlicensed, just about anything can share these frequencies with impunity.

How Wi-Fi works. Your ISP sends an internet signal to your home, where the modem receives it and turns it into internet service. You can connect to the internet directly from the modem using a wired, Ethernet connection, or you can plug a router into the modem for a wireless connection.

Home Wi-Fi Providers | Wireless Home Internet Services

Plug in your Wi-Fi dongle to the USB port of the reader. On the left hand side, Navigate to Communication-->Wireless. Under Connect to wireless network you can enter the ESSID of your Wi-Fi network if you know it followed by the Passkey. If you do not know your ESSID then you can select the Scan and Choose network option, then click the small ...
