## **Biomedical Applications of Terahertz Spectroscopy and Imaging**

Introduction. Terahertz (THz) light (Tera =  $10^{12}$ , 1 THz =  $1 \times 10^{12}$  Hz) is a million times lower frequency than X rays and is non-ionising. Therefore, it would be safe and desirable to use THz light for medical imaging for both screening and diagnostic purposes if the technology could be developed appropriately.
