Geothermal Energy: From Theoretical Models to Exploration ...

Geothermal energy is the thermal energy generated and stored in the Earth. Thermal energy is the energy that determines the temperature of matter. The geothermal energy of the Earth's crust originates from the original formation of the planet and from radioactive decay of materials. The adjective geothermal originates from the Greek roots γῆ, meaning Earth, and θερμός, meaning hot. Earth's internal heat is thermal energy generated from radioactive decay and continual heat loss from ...
