An intelligent tutoring system (ITS) is a computer system that aims to provide immediate and customized instruction or feedback to learners, usually without requiring intervention from a human teacher. ITSs have the common goal of enabling learning in a meaningful and effective manner by using a variety of computing technologies. There are many examples of ITSs being used in both formal ...

Intelligent tutoring system - Wikipedia

Adopting pedagogical theories in educational systems is essential for developing integrated solutions that follow teaching strategies for effective learning and suit to students' needs. To this direction, this paper presents a new approach of applying behaviorist theory in a tutoring system for learning programming languages.

Applying Skinnerian Conditioning for Shaping Skill ...

Psychologist Robert Sternberg defined intelligence as "mental activity directed toward purposive adaptation to, selection, and shaping of real-world environments relevant to one's life." While he agreed with Gardner that intelligence is much broader than a single, general ability, he suggested that some of Gardner's types of intelligence are better viewed as individual talents.

Theories of Intelligence in Psychology

Almost every industry sector and business function is currently looking at ways to leverage AI. While uptake of AI for education purposes began relatively slowly, it is now rapidly gaining traction in both the private as well as the public sphere. This rapid growth is being driven by a surge in AI innovation and, more importantly, an increasing recognition that AI solutions can optimize an ...
