A random variable is a variable that denotes the outcomes of a chance experiment. For example, suppose an experiment is to measure the arrivals of cars at a tollbooth during a minute period. The possible outcomes are: 0 cars, 1 car, 2 cars, ..., n cars. There are two categories of random variables (1) Discrete random variable (2) Continuous ...

Definition The probability distribution of a continuous random variable X is an assignment of probabilities to intervals of decimal numbers using a function $f(x)$, called a density function¹, in the following way: the probability that X assumes a value in the interval $[a,b]$ is equal to the area of the region that is bounded above by the graph of the equation $y=f(x)$, bounded below by the x -axis ...
